

Runink FACE: Autonomous Fulfillment User Journey

Bridging the gap between raw telemetry and autonomous workflow execution.

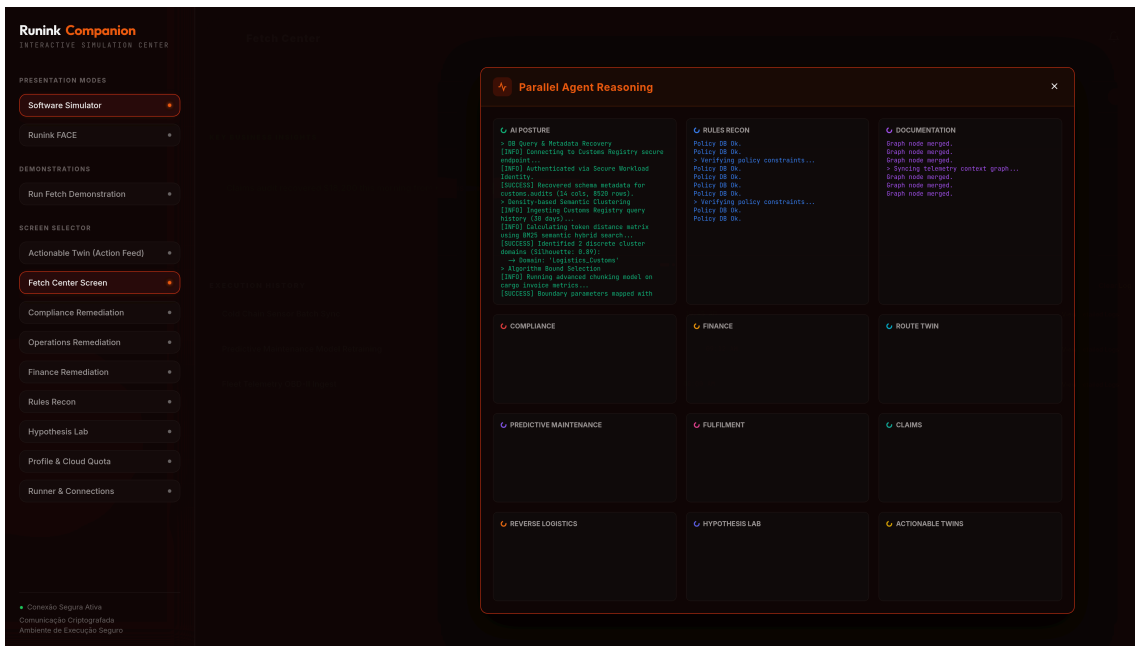

1. The Overarching Command Center (Actionable Twin)

The Actionable Twin is the heart of the operational nervous system. From here, executives monitor real-time fulfillment KPIs, evaluate supply chain impacts, and cross-sell to Priority Partners directly through the Twin Contact Lists.

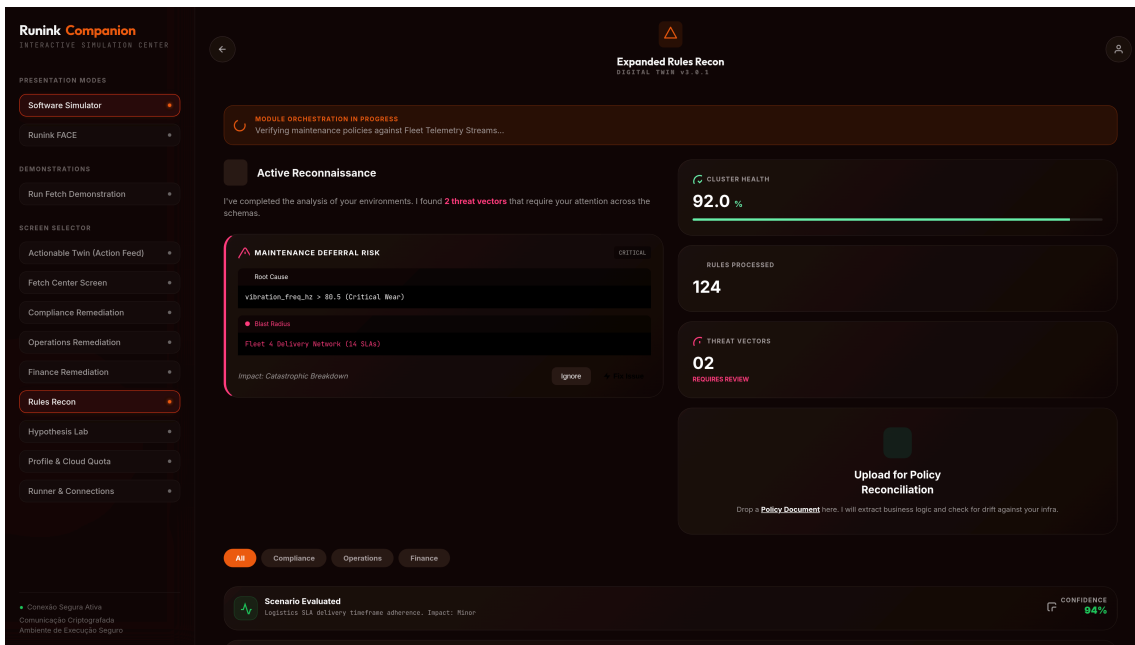

2. Intelligent Ingestion (Fetch Center)

Data chaos is transformed into structured intelligence. When a disruption occurs, the Fetch Center intercepts unstructured emails, PDFs, and sensor logs.

3. Rules & Ground Truth (Rules Recon)

The engine cross-references real-time operational data against predefined physical documents, SOPs, and SLAs to ensure total compliance before any action is executed.

4. Remediation Workflows

Once validated, the intelligent agents trigger automated remediations securely inside sandboxed environments.

Compliance Agent

Masking sensitive PII and ensuring regulatory compliance.

EXECUTION SUMMARY

1

Update Data Masking

Rule

Apply dynamic masking to email and ssn columns in the gold layer. This will prevent unauthorized access to PII data.

ALTER TABLE customer_gold
ALTER COLUMN ssn
ADD MASKING POLICY pii_mask;

2

Notify Data Privacy Officer

Required by GDPR compliance protocols. Incident ID SEC-2941 generated.

To: privacy-officer@company.com
Subject: Action Required: PII Exposure Remediation

Review Notification Draft

Changes will be applied to source system configuration

Execute Remediation

Finance Agent

Validating tariffs, calculating margins, and generating recovery claims.

Impact Analysis

CLAIMED STATUS: On Hold

PROJECTED OUTCOME: Cleared

48h Delay

RESOLUTION STEPS

1

Reconcile BOL with Manifest

Detected discrepancy in cargo weight (2400kg vs 2100kg). AI suggests adopting manifest weight.

Rule ID: R-7729

Our module was able to get better discounts over WhatsApp through messages with provider Lumina Logistics Ltd. Approve updated order?

Weight Tolerance

PUT /claims/v1/update
{
 "claimId": "CLM-9921",
 "bolWeight": 2100,
 "status": "VERIFIED"
}

Preview API Payload

2

Inform Logistics Partner

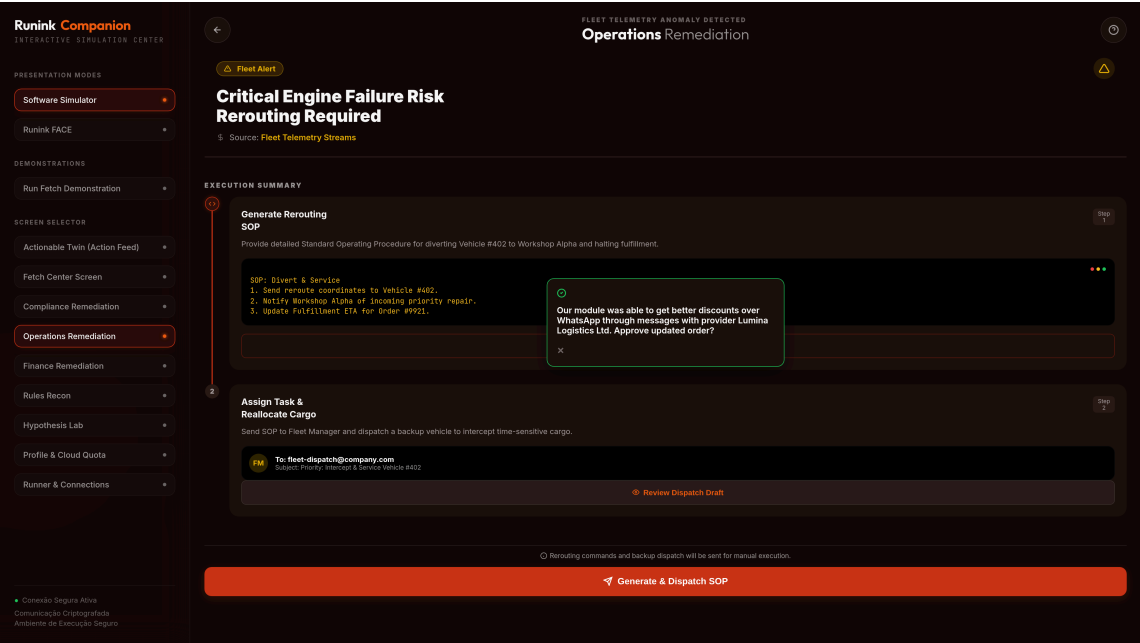

Notify FastTrack Logistics of the weight adjustment and updated claim status.

To: ops@fasttrack-logistics.com
Subject: Weight Adjustment: Order CLM-9921

Review Draft

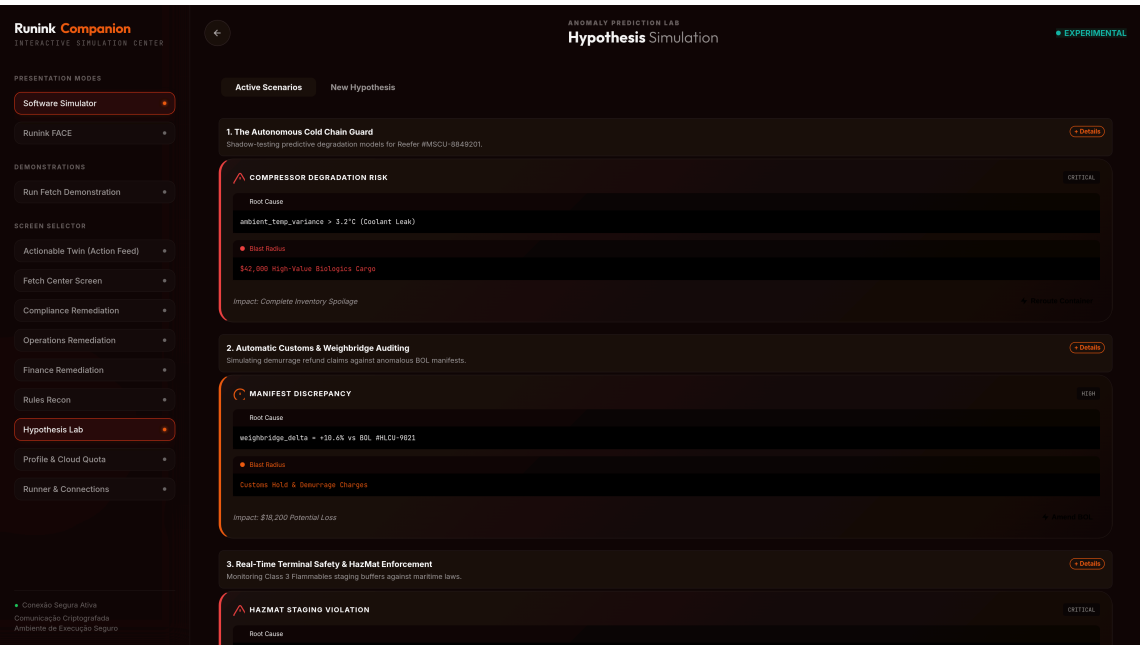

Operations Agent

Dynamically rerouting fleets and ensuring physical fulfillment continuity.

5. Predictive Risk Modeling (Hypothesis Lab)

Before deploying complex updates to production, operations are simulated in the Hypothesis Lab to forecast outcomes and stress-test the supply chain without impacting real-world performance.
